

→ Servo

To add a servo connection we use `#include <Servo.h>`.

We then "add the following":

```
Servo myservo;
```

```
void setup() {
```

```
  myservo.attach(servopin);
```

```
}
```

```
void loop() {
```

```
  myservo.write(servopos);
```

```
}
```

servopin and
servopos
are defined.
